Concert Technologies Field Technicians App (iOS & Android) – Test Completion Report

● NO UNEXPECTED FAILURES

TEST CYCLE	ENVIRONMENT	DEVICES
27 September – 2 October 2026	DEV	iPhone 17 simulator (iOS 26.5) · Pixel 7 emulator (Android 16 · API 36)
APP BUILD	REPORT DATE	PREPARED BY
1.1.1 (178) · debug build	5 October 2026	TRIARE QA
CLIENT	Concert Technologies	

Document. Version of 2026-10-02 (iOS run of 2026-09-28 and Android run of 2026-10-02) · Online version: <http://claude.ai/artifact/2sTviSM7raPbMcdxjLvYk8> · PDF: ConcertTechnologies_FieldTechnicians_Mobile_TestCompletionReport_2026-10-02.pdf · Confidential.

1. Summary

Regression testing of the Concert Technologies Field Technicians App (iOS & Android) finished with **no unexpected failures on either platform**. Both platforms run the same QA checklist of **645** checks against the same app build (1.1.1 (178)). **iOS**: 449 of 462 automated checks passed (run of 28 September 2026). **Android**: 482 of 497 automated checks passed (run of 2 October 2026). **447** checks passed on both platforms. **8** defects are open across the two platforms, none of them critical or major.

2. Scope

Automated functional regression of the field technicians' mobile app (iOS and Android) through its user interface, on the test environment (DEV). The checklist covers 12 modules:

- Splash
- Authentication
- Order list
- Order details
- Check in out
- Order progress
- Submit deliverables

- Survey
- Photo report
- Notes
- Notifications
- Profile

Out of scope

- API testing as a discipline (the API was used only to prepare test data and to verify what the app stored)
- Performance and load testing
- Security testing
- The web admin panel
- The production environment
- Real devices, tablets and operating-system versions other than those in section 3

3. Test environment

	IOS	ANDROID
Operating system	iOS 26.5	Android 16 · API 36
Device	iPhone 17 – simulator	Pixel 7 – emulator
App build	1.1.1 (178) · debug build	1.1.1 (178) · debug build
App type	Flutter	Flutter
Backend	DEV	DEV
Test automation	Appium + pytest, through the app's interface	Appium + pytest, through the app's interface
Run finished	28 September 2026, 04:13 UTC	2 October 2026, 19:55 UTC

4. Results

645

checks in the QA checklist

449

passed on iOS · of 462 automated

482

passed on Android · of 497 automated

447

passed on both platforms

By platform

Platform	Checks	Automated	Passed	Red (Known)	Could Not Run	Not Automated	Verdict
iOS	645	462	449	6	7	183	NO UNEXPECTED FAILURES
Android	645	497	482	12	3	148	NO UNEXPECTED FAILURES
Total	1290	959	931	18	10	331	NO UNEXPECTED FAILURES

The total counts each check once per platform (645 × 2). A check passes for the app only when it passed on both platforms: 447 of 645.

By module

Module	Checks	iOS Passed / Automated	Android Passed / Automated	Passed on Both
Splash	15	8 / 9	8 / 10	7
Authentication	126	80 / 81	83 / 86	80
Order list	70	46 / 52	55 / 59	46
Order details	89	55 / 56	55 / 55	54
Check in out	41	25 / 25	25 / 25	25
Order progress	42	28 / 31	29 / 31	28
Submit deliverables	33	27 / 28	31 / 32	27
Survey	57	46 / 46	51 / 51	46
Photo report	54	34 / 34	39 / 40	34
Notes	52	41 / 41	44 / 46	41
Notifications	31	26 / 26	28 / 28	26

Total	645	449 / 462	482 / 497	447

Could not run · 5 tests

PLATFORM	TEST	WHY
iOS	Tapping the PF phone opens the dialer with the number	The iOS simulator has no Phone app, so tapping the number cannot open a dialer; covered on Android.
iOS	Mismatch dialog: Cancel keeps the session, Log out ends it	On the iOS simulator the dialog closes by itself before it can be answered; to be checked on a device.
iOS	The PF phone on the In progress screen opens the dialer	The iOS simulator has no Phone app, so tapping the number cannot open a dialer; covered on Android.
iOS	The app's reaction to a successful submission: 'Deliverables sent to review successfully', 'Successful', then Check out, locked at once	The test environment answers a job submission with a server error although it records it, so the success message cannot appear.
Android	The app's reaction to a successful submission: 'Deliverables sent to review successfully', 'Successful', then Check out, locked at once	The test environment answers a job submission with a server error although it records it, so the success message cannot appear.

5. Checks not automated · iOS 183 / Android 148

Each of these has a written reason in the QA records. They are not failures: they are checks automation does not decide, grouped by why.

REASON	IOS	ANDROID
Planned for automation	36	36
Kept manual by the product owner's decision	32	33
Visual and judgement checks, kept manual	24	24
Offline behaviour – automated on Android (the iOS simulator cannot go offline)	36	—
Works differently by design – accepted by the product owner	15	15
Needs a real device or acts outside the app	15	15
Failure conditions the test environment cannot produce	10	10

REASON	IOS	ANDROID
Not observable through the app on the test environment	9	9
Requirement under clarification	3	3
Load conditions, excluded by agreement	2	2
Proved once, in another check	1	1

6. Open defects · 8

minor 6 · **cosmetic** 2. Severity as assessed by QA; priority is decided by the product owner.

DEFECT	MODULE	PLATFORM	SEVERITY	STATUS
"Updated" stays on a job after its details were opened, until the calendar is refreshed	Order list	Both	minor	Open
A deleted account stays signed in: the app keeps opening the Jobs list and the profile after a cold start	Splash	Both	minor	Open
After a connection error on the code screen, Verify does nothing until a digit is changed	Authentication	Android	minor	Open
Login with an unregistered phone number shows a generic error instead of "not registered"	Authentication	Both	minor	Open
The Jobs list is ordered by when a job was created, not by its scheduled date	Order list	Both	minor	Open
The weekly calendar keeps showing "No jobs" for jobs the refreshed Jobs list already shows	Order list	Both	minor	Open
Android: the system Back on the splash screen leaves the app	Splash	Android	cosmetic	Open
Registration caps first and last name at 50 characters while the SRS allows 100	Authentication	iOS	cosmetic	Open

Known behaviour accepted by the product owner · 3

QA reported these against the requirements; the product owner reviewed them and decided not to raise them as defects. Their checks stay red and are counted above as "red – known cause".

BEHAVIOUR	MODULE	PLATFORM	QA SEVERITY	STATUS
A photo deleted from the Photo report stays on the job on the server	Photo report	Android	major	Accepted
Editing or deleting a note never reaches the server; each new note replaces the job's notes there	Notes	Android	major	Accepted
A note created and then edited offline is not synced when the connection returns; it waits for the submission	Notes	Android	minor	Accepted

7. Exit criteria

CRITERION	IOS	ANDROID	DETAIL
Every planned test executed	No	No	iOS: 124 tests, 4 could not run (section 4) · Android: 149 tests, 1 could not run (section 4)
No unexpected test failure	Yes	Yes	iOS: 0 unexpected · Android: 0 unexpected
Every red check has a known cause	Yes	Yes	iOS: 0 unexplained · Android: 0 unexplained
No open critical defect	Yes	Yes	iOS: 0 open · Android: 0 open
No open major defect	Yes	Yes	iOS: 0 open · Android: 0 open; 2 major-severity behaviours accepted by the product owner (section 6)
P0 devices of the device matrix covered	Yes	Yes	iOS: all covered · Android: all covered

8. Residual risks and recommendations

- The 8 minor and cosmetic defects can follow in a later release.
- Accepted behaviour (major by QA's assessment):** A photo deleted from the Photo report stays on the job on the server. The product owner decided not to raise it; we recommend confirming with the client that this is intended.
- Accepted behaviour (major by QA's assessment):** Editing or deleting a note never reaches the server; each new note replaces the job's notes there. The product owner decided not to raise it; we recommend confirming with the client that this is intended.

- **Accepted behaviour (minor by QA's assessment)**: A note created and then edited offline is not synced when the connection returns; it waits for the submission. The product owner decided not to raise it; we recommend confirming with the client that this is intended.
- 78 checks stay outside automation (visual judgement, real-device behaviour): a short manual pass over them on a real device is recommended before release.
- 5 tests could not run on the test environment (section 4); re-run when the environment allows.
- Only iPhone 17 simulator (iOS 26.5), Pixel 7 emulator (Android 16 · API 36) and the test environment were covered: behaviour on real devices, other OS versions and production is not asserted by this report.
- The iOS results are from 28 September 2026, the Android results from 2 October 2026; the shared test code was extended after the iOS run. A fresh iOS run is recommended before release.
