Concert Technologies Field Technicians iOS App – Test Completion Report

● NO UNEXPECTED FAILURES

TEST CYCLE

27–28 September 2026

ENVIRONMENT

DEV

DEVICE

iPhone 17 simulator (iOS 26.5)

APP BUILD

1.1.1 (178) · debug build

REPORT DATE

5 October 2026

PREPARED BY

TRIARE QA

CLIENT

Concert Technologies

Document. Version of 2026-09-28 (iOS run of 2026-09-28) · Online version: <https://claude.ai/artifact/2sTviSM7raPbMcdxjLVYk8> · PDF: ConcertTechnologies_FieldTechnicians_iOS_TestCompletionReport_2026-09-28.pdf · Confidential.

1. Summary

Regression testing of the Concert Technologies Field Technicians iOS App finished on 28 September 2026 with **no unexpected failures**. Of the **645** checks in the QA checklist, **462** (72%) are automated: **449** passed, **6** are red because of 5 known, reported defects, and **7** could not run on the test environment for agreed reasons. **6** defects are open, none of them critical or major. The other **183** checks are not automated, each for a written reason (section 5).

2. Scope

Automated functional regression of the field technicians' mobile app (iOS) through its user interface, on the test environment (DEV). The checklist covers 12 modules:

- Splash
- Authentication
- Order list
- Order details
- Check in out
- Order progress
- Submit deliverables
- Survey
- Photo report
- Notes

- Notifications
- Profile

Out of scope

- API testing as a discipline (the API was used only to prepare test data and to verify what the app stored)
- Performance and load testing
- Security testing
- The web admin panel
- The production environment
- Real devices, tablets and operating-system versions other than those in section 3

3. Test environment

	IOS
Operating system	iOS 26.5
Device	iPhone 17 – simulator
App build	1.1.1 (178) · debug build
App type	Flutter
Backend	DEV
Test automation	Appium + pytest, through the app's interface
Run finished	28 September 2026, 04:13 UTC

4. Results

By module

MODULE	CHECKS	AUTOMATED	PASSED	RED (KNOWN)	COULD NOT RUN	NOT AUTOMATED
Splash	15	9	8	1	0	6
Authentication	126	81	80	1	0	45
Order list	70	52	46	4	2	18
Order details	89	56	55	0	1	33
Check in out	41	25	25	0	0	16
Order progress	42	31	28	0	3	11
Submit deliverables	33	28	27	0	1	5
Survey	57	46	46	0	0	11
Photo report	54	34	34	0	0	20
Notes	52	41	41	0	0	11
Notifications	31	26	26	0	0	5
Profile	35	33	33	0	0	2
Total	645	462	449	6	7	183

Could not run · 4 tests

TEST	WHY
Tapping the PF phone opens the dialer with the number	The iOS simulator has no Phone app, so tapping the number cannot open a dialer; covered on Android.
Mismatch dialog: Cancel keeps the session, Log out ends it	On the iOS simulator the dialog closes by itself before it can be answered; to be checked on a device.
The PF phone on the In progress screen opens the dialer	The iOS simulator has no Phone app, so tapping the number cannot open a dialer; covered on Android.

TEST	WHY
The app's reaction to a successful submission: 'Deliverables sent to review successfully', 'Successful', then Check out, locked at once	The test environment answers a job submission with a server error although it records it, so the success message cannot appear.

5. Checks not automated · 183

Each of these has a written reason in the QA records. They are not failures: they are checks automation does not decide, grouped by why.

REASON	CHECKS
Planned for automation	36
Offline behaviour – automated on Android (the iOS simulator cannot go offline)	36
Kept manual by the product owner's decision	32
Visual and judgement checks, kept manual	24
Works differently by design – accepted by the product owner	15
Needs a real device or acts outside the app	15
Failure conditions the test environment cannot produce	10
Not observable through the app on the test environment	9
Requirement under clarification	3
Load conditions, excluded by agreement	2
Proved once, in another check	1

6. Open defects · 6

minor 5 · **cosmetic** 1. Severity as assessed by QA; priority is decided by the product owner.

DEFECT	MODULE	SEVERITY	STATUS
"Updated" stays on a job after its details were opened, until the calendar is refreshed	Order list	minor	Open
A deleted account stays signed in: the app keeps opening the Jobs list and the profile after a cold start	Splash	minor	Open

DEFECT	MODULE	SEVERITY	STATUS
Login with an unregistered phone number shows a generic error instead of "not registered"	Authenticat ion	minor	Open
The Jobs list is ordered by when a job was created, not by its scheduled date	Order list	minor	Open
The weekly calendar keeps showing "No jobs" for jobs the refreshed Jobs list already shows	Order list	minor	Open
Registration caps first and last name at 50 characters while the SRS allows 100	Authenticat ion	cosmetic	Open

7. Exit criteria

CRITERION	MET	DETAIL
Every planned test executed	No	124 tests, 4 could not run (section 4)
No unexpected test failure	Yes	0 unexpected
Every red check has a known cause	Yes	0 unexplained
No open critical defect	Yes	0 open
No open major defect	Yes	0 open
P0 devices of the device matrix covered	Yes	all covered

8. Residual risks and recommendations

- The 6 minor and cosmetic defects can follow in a later release.
- 39 checks stay outside automation (visual judgement, real-device behaviour): a short manual pass over them on a real device is recommended before release.
- 4 tests could not run on the test environment (section 4); re-run when the environment allows.
- Only iPhone 17 simulator (iOS 26.5) and the test environment were covered: behaviour on real devices, other OS versions and production is not asserted by this report.
